

# *nitroKmag*

**NitroK Mag** is Can Grow's premier sidedress nutrient product. It contains the amine form of nitrogen, potassium and magnesium as well as critical micronutrients and bio stimulants. Can Grow uses amine N because it is the form of N most easily taken up and requires no conversion within the plant—increasing plant efficiency. Potassium uptake begins to rapidly increase at sidedress time—we include K in the sidedress band for maximum availability. Magnesium is essential to photosynthesis and also runs the pump that moves sugars into the kernels. Including magnesium ensures efficient sugar production and movement to where it is most needed in the plant.

**NitroK Mag** formulations also include:

**Perc Plus** to increase plant metabolism and nutrient use efficiency

**Thrust** for increased uptake and impact of all nutrients in the solution and stabilize nitrogen

**Bio-Forge** to relieve and prevent stress in critical growth stages prior to pollination

**Zinc** for chlorophyll production and carbohydrate metabolism

**Manganese** to improve nitrogen utilization

**Boron** to increase kernel set and retention

**20-0-5-1Mg**

**16-0-6-1Mg**

**18-0-6-1Mg**

**10-0-8-1Mg**

**4-0-10-1.5 Mg**
